

ENGINEERING
PERFORMANCE

Real-time Tracking

Monitor the process of material and products in real time enabling visibility in production processes.

Traceability & Quality

Designed to track raw materials, components and finished product throughout the manufacturing process.

System Integration

Integrated to ensure data is accurate, consistent and easily accessible across ERP & WMS systems.

BARCODE SCANNERS

AGILITY | FLEXIBILITY | EFFICIENCY

Huffman Engineering, Inc.'s experience implementing bar code scanners into manufacturing processes plays a crucial role in streamlining manufacturing processes and improving efficiency. The use of bar code scanning plays a vital role in modern manufacturing operations to stay competitive in the ever-changing landscape by improving accuracy, efficiency, enhancing traceability and driving data-driven decision making and improving data integrity.

- Inventory management helps maintain optimal stocking levels
- Scanning reduces the chance for human error improving accuracy
- Increased productivity and quicker turnaround times comes with barcode scanning
- Automated systems reduce the need for manual intervention and expedites the process
- Error prevention is built into the program using predetermined criteria
- Analyze and gain insight in production trends, efficiency and areas for improvement
