

**ENGINEERING**  
PERFORMANCE

## Accuracy of Error Detection

Analyze and Detect product defects faster and more accurately than human employees

## Quality & Validation

Designed to meet everchanging quality and validity standards across multiple platforms with consistency

## Greater Precision

Programmed to measure and accurately analyze products and components with precise accuracy

# VISION SYSTEMS

AGILITY | FLEXIBILITY | EFFICIENCY

Huffman Engineering, Inc.'s vast experience with deploying vision systems into existing processes and their knowledge and expertise with Cognex vision systems among others makes them a leader in understanding how to apply and incorporate vision systems in a production line. Vision systems can become a cost efficient addition to your production line improving quality and safety at the same time.

- Deployable on multiple processing systems both existing and new custom equipment
- Integration into customer's existing plant systems to relieve labor shortages for roles once designated for human eyes
- Cost saving with increased efficiency, speed and reduction in human personnel costs
- Increased safety identifying potential hazards and 24/7 real-time monitoring
- Portability and flexible configurations allowing for agility within production lines
- Improved quality control with high standards
